

BAB V

KESIMPULAN DAN SARAN

5.1 Kesimpulan

Dari hasil analisa Indeks Kekeringan selama 20 tahun (2000 - 2019) di Kecamatan Pujut, Kabupaten Lombok Tengah dapat disimpulkan bahwa :

1. Menggunakan metode *Theory of Run* di Kecamatan Pujut mengalami kekeringan terpanjang pada tahun 2001 yaitu selama 11 bulan. Rata-rata kekeringan yang terjadi mulai dari bulan April sampai bulan November. Puncak kekeringan terjadi pada tahun 2001 bulan mei dengan nilai indeks sebesar -803,47 (ekstrim kering).
2. Hasil verifikasi indeks kekeringan *Theory of Run* dengan data BPBD Provinsi NTB dengan melakukan akurasi data melalui persentase kesesuaian untuk BPBD – THR sebesar 66,7%

5.2 Saran

Sesuai dengan kesimpulan yang didapat maka penulis ingin memberikan saran antara lain :

1. Penelitian ini dapat dikembangkan untuk menghitung analisis indeks kekeringan menggunakan variabel lain selain data hujan dan data suhu untuk kemudian dapat dibandingkan dengan penelitian ini sehingga dapat memberikan gambaran yang lebih baik.
2. Analisa pemodelan hanya dilakukan dengan regresi linier sederhana dan ganda, sehingga peneliti menyarankan mencoba menghitung dengan analisa regresi non linier.
3. Variabel yang digunakan hanya menggunakan 14 variabel dari 136 variabel yang disediakan oleh IPCC sehingga untuk peneliti selanjutnya bisa menambah variabel perubahan iklim yang belum digunakan.
4. Perlu menggunakan metode analisa kekeringan yang lain untuk membandingkan sejauh mana keakuratan hasil prediksi kekeringan.
