

BAB V

KESIMPULAN DAN SARAN

5.1 Kesimpulan

- 1.a. Dari hasil pengujian tanah Apit Aiq memiliki sifat fisik dengan kadar air awal saat pengambilan sampel tanah sebesar 16,59%, berat isi tanah basah 1.792 gr/cm³, berat tanah kering 1.541 gr/cm³, berat jenis 2.64 gr/cm³, batas cair 29.87%, batas plastis 21.70%, batas susut 13.16%, indeks plastisitas 8.16%, distribusi lolos saringan No. 200 sebesar 29.72%, yang kemudian diklasifikasikan berdasarkan *Unified* sebagai SC dan AASHTO sebagai A-2-4. Sedangkan untuk pengujian sifat mekanik tanah Apit Aiq diperoleh nilai CBR sebesar 5.34%.
 - b. Dari hasil pengujian Tanah Gunung Anyar memiliki sifat fisik dengan kadar air awal saat pengambilan sampel tanah sebesar 14.05%, berat isi tanah basah 1.914 gr/cm³, berat tanah kering 1.643 gr/cm³, berat jenis 2.70 gr/cm³, batas cair 24.03%, batas plastis 23.58%, batas susut 13.11%, indeks plastisitas 0.45%, distribusi lolos saringan No. 200 sebesar 34.84%, yang kemudian diklasifikasikan berdasarkan *Unified* sebagai SM dan AASHTO sebagai A-2-4. Sedangkan untuk pengujian sifat mekanik tanah Gunung Anyar diperoleh nilai CBR sebesar 6.41%
 - c. Dari hasil pengujian Tanah Segerining memiliki sifat fisik dengan kadar air awal saat pengambilan sampel tanah sebesar 24.18%, berat isi tanah basah 1.743 gr/cm³, berat tanah kering 1.350 gr/cm³, berat jenis 2.50 gr/cm³, batas cair 27.22%, batas plastis 24.02%, batas susut 11.62%, indeks plastisitas 3.20%, distribusi lolos saringan No. 200 sebesar 34.44%, yang kemudian diklasifikasikan berdasarkan *Unified* sebagai SM dan AASHTO sebagai A-2-4. Sedangkan untuk pengujian mekanik tanah Segerining diperoleh nilai CBR sebesar 10.26%
2. Berdasarkan syarat spesifikasi Bina Marga yang menyatakan nilai CBR untuk bahan timbunan biasa minimal 6% dan timbunan pilihan sebesar 10.26% dari penelitian yang dilakukan nilai CBR tanah Apit Aiq

didapatkan sebesar 5.34% hal ini menunjukkan bahwa tanah Apit Aiq tidak dapat memenuhi standar spesifikasi Bina Marga untuk digunakan sebagai tanah timbunan biasa maupun pilihan sehingga tidak layak sebagai sumber bahan timbunan. Adapun tanah Gunung Anyar memiliki nilai CBR sebesar 6.41% yang menunjukkan bahwa tanah ini layak sebagai tanah timbunan biasa namun tidak digunakan sebagai bahan timbunan pilihan. Kemudian untuk tanah Segerining diperoleh nilai CBR sebesar 10.26% yang menunjukkan bahwa tanah ini layak untuk digunakan sebagai tanah timbunan biasa maupun pilihan.

5.2 Saran

Berdasarkan hasil penelitian yang telah dilakukan, agar penelitian selanjutnya dapat memperoleh hasil yang lebih baik, maka disarankan:

1. Pengujian dilakukan beberapa kali agar mendapat data yang tepat dan lebih lengkap sebagai sarana perbandingan hasil penelitian.
2. Pada saat pengujian plastisitas tanah perlunya untuk memperhatikan ukuran serta keretakan tanah agar memperoleh hasil yang lebih tepat.
3. Sebelum melakukan pengujian CBR perlunya untuk mengetahui kadar airnya apakah sudah sesuai dengan pengujian pemandatan yang dilakukan.
4. Untuk pembacaan data saat melakukan penelitian alangkah lebih baik jika menggunakan peralatan yang berupa digital untuk menghindari kesalahan dalam pembacaan data.
5. Untuk penelitian selanjutnya diharapkan untuk mencoba melakukan penelitian di daerah lainnya dengan sifat atau ciri tanah yang berbeda agar lebih banyak mengetahui perbedaan masing-masing tanah berdasarkan jenisnya.
