ABSTRACT

Coronavirus Disease-19 (COVID-19) is a worldwide event that poses a hazard to public health. In order to prevent the spread of COVID-19, it is critical to increase public awareness about the pandemic as well as clean and healthy living habits. The goal of the study was to establish the community's degree of knowledge and behavior towards COVID-19 in the Pagesangan, Bedidas area. This is a descriptive observational study that uses a cross sectional method and uses a successive sampling technique. The sample for this study was 100 people from Pagesangan village in the Bedidas neighborhood, and the method employed was a questionnaire. According to the findings, persons with good knowledge account for 66%, adequate knowledge for 28%, and lack of knowledge for 6%, whereas those with good behavior account for 66%, adequate knowledge for 31%, and bad behavior account for 3%. The results demonstrate that public awareness of COVID-19 is good, with an average score of 82%, and public behavior toward COVID-19 is also positive, with an average score of 81.17%.
